

King Seed Brand Sorghum Sudangrass

TASTEE BMR Brown Midrib Sorghum x Sudangrass

TASTEE BMR expresses the “brown midrib” characteristics producing higher palatability for grazing and better quality hay or silage. This new hybrid expresses a wider leaf area, better digestibility due to the lower lignin content. TASTEE BMR will become a favorite with dairy and beef producers. A smaller seed size also contributes to a substantial savings in seed costs per acre.
